ICE CASTLES · CASTLE QUEST · GUEST APP

Art asset list

Stand-ins that most affect how cheap the app feels. One Realm set can cover most screens. Prefer SVG for icons; PNG with a transparent background if painted. Export 3× for raster (64 → 192 px). Keep a safe circle inside a square so landing pips, shrine gems, and Aurora pads can share one file. No type in the images except the Seal.

1. Make first — reuse everywhere

Same five symbols, two sizes. Use on the landing, header pips, Aurora tap buttons, award glyph, and Heart "remaining Realms." Treat these as ice-carved seals, not generic weather emoji. Off state can be the same art, frost-etched / unlit.

Asset	Size	Where it shows	Now
Water icon	64×64 and 128×128 SVG/PNG	Landing, header, Aurora, award	Emoji / CSS blob
Earth icon	same	same	same
Fire icon	same	same	same
Air icon	same	same	same
Spirit icon	same	same	same
Realm icon **on** (awakened)	64×64	Header pips after a Realm is done	Opacity + glow on the emoji
Realm icon **off** (asleep)	64×64	Header pips, landing at 0/5	Dim emoji

Suggested names: `realm-water.svg`, `realm-earth.svg`, `realm-fire.svg`, `realm-air.svg`, `realm-spirit.svg` (plus `-on` / `-off` if you paint two states).

2. Landing

Asset	Size	Notes
Landing crest	SVG, plus 1024×1024 PNG	Compass mark: mountain in a crystal ring, no snow on the top point. Above "Castle Quest" on the welcome page, beside the name in the header, on the loading screen, and as the browser icon. Source file `logo-mark.svg`. `logo-mark.png` is that SVG rendered with a transparent background, for browsers that need a PNG icon.
Ice-gate hero	1080×1400 (or taller)	Replaces `landing-gate.svg`. Night corridor, lanterns, no baked-in text
Begin Quest button	1092×174 (3× a ~364×58 pill)	Icy capsule, optional carved edge. We can also keep CSS and only swap a left-side icon
How to Play icon	64×64	Book / tablet on the pill
Map icon	64×64	Pin / compass on the pill
How to Play + Map button plates	540×144 each	Optional if you want full illustrated pills instead of CSS

3. Chrome and shrine buttons

Asset	Size	Where
Meet	128×128	Shrine gate (handshake stand-in)
Discover	128×128	Shrine gate (compass stand-in)
Play	128×128	Shrine gate (play-triangle stand-in)
Map chip	64×64 or full 108×36 pill	Header "Map"
Journey / progress ring center	64×64	Header ring (now a number)
Recenter	64×64	Map tool
Guardian-only (star)	64×64	Map tool
Filter	64×64	Map tool
Scan	128×128	Map scan FAB
Back to Quest	64×64 or pill	Map "Quest" FAB

Suggested names: `icon-meet.svg`, `icon-discover.svg`, `icon-play.svg`, `icon-map.svg`, `icon-scan.svg`.

4. Map pins

Asset	Size	Notes
Guardian pin — available	128×128	Extra glow. One per Realm, or one base + 5 color overlays
Guardian pin — complete	128×128	Dimmer / check / seal
Park pin (default)	96×96	Amenities / landmarks
Pin check mark	64×64	Replaces the tiny SVG tick

5. Challenges (placeholders until real photos)

Asset	Size	Station
6 Cascade tiles	512×512	Hairline vein, lantern glow, pressed arch, silk wing, frozen ripple, carved rune
4 Ember lanterns	256×256	Ice, Amber, Rose, Violet
Aurora tap pads	256×256	Reuse the five Realm icons
Winter Keeper Seal	1024×1024	Finale reveal (now CSS rings). Type OK here: names, venue, season will sit on or under it
Award medallion	512×512	Realm-complete overlay; glyph sits on top

6. Nice later — not required for "buttons look better"

Asset	Size	Notes
Guardian portraits	1080×1350	Cascade, Granite, Ember, Summit, Aurora shrine headers
Monument / Heart art	same	Station pages
App icon	1024×1024 PNG	Same compass mark on a night-blue plate so the crystal tips stay inside the home-screen mask. Phones still need a PNG here. `logo-mark-app.png`

If you only make one batch

Five Realm seals + Meet / Discover / Play + landing gate + How to Play / Map icons. That covers the screens guests see first.

- Begin Quest file: `btn-begin-quest.png`
- Landing gate: `landing-gate.webp`
